

GAP Penthouse

GAP Penthouse Project – Location

The GAP Penthouse Project was a monumental undertaking, involving a Roof Penthouse HVAC System Full Replacement that covered 960-tons of cooling across two buildings. ATS proudly served as the Prime Contractor, providing HVAC Engineering, In-House Construction Services, and expert management of permitting, structural engineering, electrical engineering, and all subcontractors directly for the building owner.

What truly sets this project apart is ATS's unwavering commitment to excellence. From close collaboration with the factory start-up and building owner to meticulous preparations for future tenants, ATS left no detail unattended. Rigorous air and water balance, temperature control integration, and design coordination were all part of our dedication to delivering a transformative HVAC solution.

The GAP Penthouse Project showcases ATS's expertise in tackling complex HVAC projects and delivering outstanding service that consistently exceeds expectations.

Contract Amount: \$4.75 Million
